Experience

Petrovich-Tech, Senior QA Engineer

I do full-cycle testing for the Petrovich (one of Russia's biggest hardware retailers) catalog and related areas — products, listings, search, reviews. About 30% frontend, most of it backend: microservices, ERP integrations, external systems.

Daily tools: Postman, Swagger, PostgreSQL, Jira, Confluence, Jenkins, Gitlab. Sometimes Redis and Kafka.

I write test plans for big tasks, test cases, manage regression tests, and see features through to production. I also write UI and API autotests (Python, Selenium, Playwright), write testing docs, mentor new team members, and built a few Chrome extensions to make work easier.

- Full-cycle testing.
- Frontend, backend, integrations.

1 year

Restoclub.ru, Project Manager

Restoclub is a big and complex project. It includes a website, restaurant owner dashboard, admin panel, CRM, and microservices for email delivery, analytics, and monitoring. In a 7-person team, I worked on website development: gathered requirements, managed priorities, built development processes, advised clients.

I handled testing, trained staff, and set up QA processes. Main achievements: migrated 40+ templates to a new responsive design, added analytics to the restaurant dashboard, built a reporting system, set up server and app monitoring, created an email system with integrations, built dozens of automation tools. Created a knowledge base with 300+ articles, managed the team, and did hiring.

2011 – 2014
3 years

Education		
Unfinished	St. Petersburg State University, Public Relations	St. Petersburg, Russia 2007 – 2013

Volunteer		
	OpenStreetMap, Mapper	2021 – present
Member of the Georgian OpenStreetMap community. Since 2022, we significantly improved the map quality of Georgia. Completed several projects: connected all settlements to Wiki-data, organized and standardized all settlements (added missing ones, removed duplicates, fixed errors), standardized all streets in Kutaisi, mapped buildings and streets in Kutaisi.
